**Defense Manpower Data Center
Human Resources Strategic Assessment Program
4800 Mark Center Drive, Suite 04E25-01, Alexandria, VA 22350-4000**

Acknowledgments

Defense Manpower Data Center (DMDC) is indebted to numerous people for their assistance with the *2012 Survey of Active Duty Spouses*, which was conducted on behalf of the Office of the Under Secretary of Defense for Personnel and Readiness (OUSD[P&R]). The survey program is conducted under the leadership of Kristin Williams, Director, *Human Resources Strategic Assessment Program* (HRSAP).

Policy officials contributing to the development of this survey included Cathy Flynn and Yuko Whitestone (Military Community and Family Policy).

DMDC's Survey Design, Analysis & Operations Branch, under the guidance of Paul Rosenfeld, Branch Chief, is responsible for the development of questionnaires used in the survey program. The lead survey design analyst was Malikah Dorvil. She designed the unique presentation of complex items used in this tabulation volume. Carol Newell, Team Lead of Survey Operations, is responsible for the survey database construction and archiving. The lead operations analyst on this survey was Deepika Batra, SRA International, Inc.

DMDC's Statistical Methods Branch, under the guidance of Dave McGrath, Branch Chief, is responsible for developing the sampling and weighting methods used in the survey program. The lead sampling analyst was Jeffrey Schneider, who designed the sample and developed weights for this survey. Susan Reinhold provided programming support for the sampling and weighting tasks. Data Recognition Corporation (DRC) performed data collection and editing.

Lynn Walthall, SRA International, Inc., formatted and assembled this tabulation volume using DMDC's Survey Reporting Tool. A team consisting of Deepika Batra, Malikah Dorvil, and Amy Campbell, SRA International, Inc., completed quality control for this tabulation volume.

2012 SURVEY OF ACTIVE DUTY SPOUSES: TABULATIONS OF RESPONSES

Introduction to the Survey

The *Human Resources Strategic Assessment Program* (HRSAP), Defense Manpower Data Center (DMDC), conducts both Web-based and paper-and-pencil surveys to support the personnel information needs of the Under Secretary of Defense for Personnel and Readiness (USD[P&R]). These surveys assess the attitudes and opinions of the entire Department of Defense (DoD) community on a wide range of personnel issues. *Human Relations Surveys* are in-depth studies of topics and populations, often requiring both paper-and-pencil surveys and Web-based surveys that take longer to develop, administer, and analyze.

This report contains tabulations of responses from the *2012 Survey of Active Duty Spouses (2012 ADSS)* conducted November 19, 2012 to March 11, 2013. This introduction (1) summarizes the survey content, (2) defines the total population surveyed and the subgroups used in the tabulations of responses, (3) summarizes the survey methodology,¹ and (4) provides details on how to use the tabulations. The tabulations and a copy of the survey items follow this introduction.²

Survey Content

The *2012 ADSS* continues a line of research on active duty spouses begun with the *1985 DoD Surveys of Officer and Enlisted Personnel and Military Spouses*. In 1992, 1999, 2006, and 2008, DMDC conducted subsequent Joint Service surveys of active duty spouses. Many key topics covered by the *2012 ADSS* were also included in its predecessors; however, questions have been updated or streamlined in the *2012 ADSS*. The survey was administered by both Web and paper-and-pencil questionnaires. The Web version of the survey contained additional survey items, which are identified in the tabulations. The Web questionnaire appears in Appendix A, and the paper-and-pencil questionnaire appears in Appendix B. The survey was subdivided into the following ten topic areas:

1. *Background Information*—Marital status, length of marriage, nights away, housing location, race/ethnicity, age, dependents, and member's active duty status.
2. *Education and Employment*—Spouse education level and goals, current academic enrollment status and barriers to pursuing further education, military service, spouse employment status, reasons for not looking for work, weeks spent looking for work, hours worked per week, reasons for working part-time, current career field, use of Career Advancement Accounts, spouse engagement in the workplace, professional

¹ Details on survey methodology are reported by DMDC (2013b).

² The survey was administered via the Web and paper-and-pencil questionnaires. Question numbering differed between the Web and paper questionnaires. The tabulations follow the order of items used on the Web administration. Appendix A provides the order of items used on the Web administration, and Appendix B provides the order of items used on the paper-and-pencil administration.

license/certification, desire/need to work, importance of working, and telework preference.

3. *Permanent Change of Station (PCS) Moves*—Number of spouse moves, length of time since most recent PCS move, length of time to find employment after last PCS move, and transfer of professional licensure.
4. *The Military Spouse's Family*—Special medical/educational needs of the family, enrollment in the Exceptional Family Member Program, number of children living in household, use of child care, satisfaction with on- and off-base child care, number of children using child care, birth date and gender of one child living in household, attachment behaviors of this one child, and impact of military family life on this one child in past 12 months.
5. *Health and Well-Being*—Perceptions of stress, mental and physical health, family coping, marital satisfaction and stability, access and use of counseling, usefulness of counseling sources, and attitudes towards receiving counseling.
6. *Feelings About Military Life*—Overall satisfaction with military way of life, spouse's support to stay on active duty, nights away in past 36 months, perceived social support, use of Military OneSource, and usefulness of Military OneSource features/services.
7. *Your Spouse's Deployments*—Times member deployed in past 12 months, relocation during deployments, member's current deployment, spouse expectations of member's return from deployment, deployment to combat zone, and impact of deployments on spouse and family life.
8. *Effect of Deployments on Children*—Identified child's deployment experiences, use of resources and programs during most recent deployment, behavior problems, spouse's need for child care during deployment, and child's coping ability.
9. *Reunion and Reintegration*—Service member's wounded status during most recent deployment, member's wound interference with family participation, timing of Service member's return, member's emotional and behavioral state after returning, member's ability to reconnect with children upon return, spouse's readjustment to member's return, spouse's use of available deployment-related resources, spouse's expectation of next deployment, and member's military retention plans.
10. *Financial Well-Being*—Perceived financial condition, financial problems experienced, saving habits, emergency savings, and total household monthly earnings and spouse's monthly earnings.

Population and Reporting Categories

The target population for the 2012 ADSS consisted of spouses of active duty members of the Army, Navy, Marine Corps, and Air Force, excluding National Guard and Reserve members, who (1) have at least six months of service at the time the survey is first fielded and (2) are below flag rank. In addition, for the respondent to

remain eligible, they must have indicated at the time of the survey that they were currently married to an active duty member.³ Survey results are presented for the total DoD population and by a variety of reporting categories. To form the reporting categories for the tabulations, respondents are classified by administrative record data for member categories of Service, paygrade, enlisted years of service, and the spouse category of gender. The remaining reporting categories are based on survey self-report. Definitions for reporting categories follow:

- *Member Service*—The categories include *Army*, *Navy*, *Marine Corps*, and *Air Force*.
- *Member Paygrade*—The *Enlisted* subgroup includes all enlisted paygrades (*E1 – E9*). The *Enlisted* subgroup is broken into the following groups: *3 to 5 Years* (i.e., first-term decision window), *6 to 9 Years* (i.e., second-term decision window), *E1 – E4s*, and *E5 – E9s*. The *E5 – E9* category is further broken into *E5 – E6* and *E7 – E9*. The *Officers* subgroup includes warrant officers and commissioned officers (*O1 – O3* and *O4 – O6*).
- *Member Deployment Status*⁴—*Not Deployed Career* includes spouses whose husband/wife had not been deployed for 30 consecutive days or more in their careers. *Deployed Career* includes spouses whose husband/wife had been deployed for 30 or more consecutive days in their careers. *Deployed Career* is also broken down into *Deployed Multiple Times*. This category includes spouses whose husband/wife had been deployed more than once in their careers. *Not Deployed Past 12 Months* includes spouses whose husband/wife had not been deployed in the preceding 12 months. *Deployed Past 12 Months* includes spouses whose husband/wife had been deployed in that time. This category is further broken down into *Currently Deployed*, which includes spouses whose husband/wife was deployed at the time the spouse submitted the survey.
- *Spouse Gender*—This category is self-explanatory.
- *Spouse Education*—Respondents are classified based on self-reported educational attainment. *No College* includes those without any college credit. *Some College* includes those with some college credit, including a two-year degree, but does not include those with a four-year degree. *Four-Year Degree* includes those with a four-year degree and those with some graduate school, but no graduate or professional degree. *Graduate/Professional Degree* includes those with masters, doctorates, and other professional degrees.
- *Spouse Race/Ethnicity*—Respondents are classified based on self-reported categories consistent with requirements of the *Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity* (1997). *Total Minority* includes all persons marking one or more of the races other than White and/or marking that they are Spanish/Hispanic/Latino. *Non-*

³ An active duty member married to another active duty member would be eligible for the survey depending on their spouse's status, not their own.

⁴ Member deployment status is based on spouse's survey responses.

Hispanic Black includes persons marking only⁵ Black or African American and not reporting being Spanish/Hispanic/Latino. *Hispanic* includes anyone marking that they are Spanish/Hispanic/Latino, regardless of how they answered the question on race.

- *Spouse Age*—Categories include *Less Than 26 Years Old*, *26 to 30 Years*, *31 to 35 Years*, *36 to 40 Years*, and *More Than 40 Years Old*.
- *Spouse Employment*—Spouses are classified based on self-reports of employment status and membership in the Armed Forces. Categories include *Employed*, *Unemployed*, *Not in Labor Force*, and *Armed Forces Member*.
- *Family Status*—Categories include *With Children* and *Without Children*.
- *Child Demographics*—Respondents are classified based on self-report age of the child in their household whose birth month is closest to the respondent's birth month. Child age is divided into the following categories: *Less Than 6 Years Old*, *6 to 12 Years Old*, and *13 to Less Than 18 Years Old*.
- *Service by Paygrade*—The categories include each of the Services by enlisted and officer paygrade groups.

Survey Methodology

The Web survey administration process began on November 19, 2012, with the mailout of notification letters to sample spouses. The notification letter explained why the survey was being conducted, how the survey information would be used, and why participation was important. Throughout the administration period, additional e-mail and postal reminders were sent to encourage survey participation. Data were collected between November 19, 2012 to March 11, 2013. Paper surveys were mailed on December 10, 2012, to those who did not respond via the Web.

Single-stage, nonproportional stratified random sampling⁶ procedures were used. The sample consisted of the spouses of 65,000 members drawn from the sample frame constructed from DMDC's March 2012 *Active Duty Master Edit File*, March 2012 *Family Database*, March 2012 *Active Duty Pay File*, March 2012 *Basic Allowance for Housing Population File*, and March 2012 *Defense Enrollment Eligibility Reporting System (DEERS) File*. Spouses of the sample became ineligible if they indicated in the survey or by other contact (e.g., telephone calls to the data collection contractor) that they were divorced, widowed, or their husband or wife was no longer on active duty as of the first day of the Web survey, November 19, 2012 (0.69% of sample).

⁵ Persons marking they are Black or African American and another race are not in this category.

⁶ In stratified random sampling, all members of a population are categorized into homogeneous groups. For example, spouses might be grouped by the gender and Service of their husband or wife (e.g., spouses of all male Army personnel in one group, spouses of all female Navy personnel in another). Within each group, spouses of active duty members are chosen at random. Small groups are oversampled in comparison to their proportion of the population so there will be enough responses from small groups to analyze. Weights are used so that groups are correctly represented in the analyses.

Completed surveys (defined as 50% or more of the survey questions asked of all participants were answered, including the two critical questions, Q1 and Q2) were received from 12,275 eligible respondents. The overall weighted response rate for eligibles, corrected for nonproportional sampling, was 23%.

Data were weighted using the industry standard three-stage process. This form of weighting produces survey estimates of population totals, proportions, and means (as well as other statistics) that are representative of their respective populations. Unweighted survey data, in contrast, are likely to produce biased estimates of population statistics. The three stage process of weighting consists of the following steps:

- *Adjustment for selection probability*—Probability samples such as the sample for this survey are selected from lists and each member of the list has a known nonzero probability of selection. For example, if a list contained 10,000 spouses in a demographic subgroup and the desired sample size for the subgroup was 1,000, one in every tenth spouse of the list would be selected. During weighting, this selection probability (1/10) is taken into account. The base, or first weight, used to adjust the sample is the reciprocal of the selection probability. In this example, the adjustment for selection probability (base weight) is 10 for spouses in this subgroup.
- *Adjustments for nonresponse*—Some sampled spouses do not respond to the survey. Continuing the previous example, suppose only half of the sample spouses, 500, completed and returned a survey. Because the unweighted sample size would only be 500, weights are needed to project the sample up to the subgroup population total (10,000). In this case, the base-weighted respondents would sum to only 5,000 weighted respondents. To adjust for nonresponse, the base weights are multiplied by the reciprocal of the nonresponse rate. In this example, the base weight (10) is multiplied by the reciprocal of the nonresponse rate (2) to create a new weight of 20. The weighted sample sums to the subgroup population total of 10,000.
- *Adjustment to known population values*—The first of the two previous weighting adjustments are applied according to the demographic groupings used in designing the subgroups for the sample. The second is based on population characteristics that are known to be related to whether a sample person responds to the survey. Because the sample design and adjustments for nonresponse cannot take into account all demographic differences related to who responds to a survey and how they respond, auxiliary information is used to increase the precision of survey estimates. For this reason, a final weighting adjustment is computed that reproduces population totals for important demographic groupings related to who responds to a survey and how they might answer the survey. Suppose in our example the population for the subgroup was 8,500 men and 1,500 women but the nonresponse-adjusted weighted estimates from the respondents was 7,000 men and 3,000 women. To reduce this possible bias and reproduce known population totals, the weights would be adjusted by 1.21 for men and 0.5 for women so that the final weights for men and women would be 24.3 and 10, which would give unbiased estimates of the total and of women and men in the subgroup.

Table 1 (pages 8-9) shows the number of respondents and the portion of total respondents in each reporting group. Also shown are the estimated number of spouses and the portion of total spouses in each reporting group. Differences in the percentages of respondents and population for the reporting categories reflect differences in the number sampled, as well as differences in response rates.⁷

Tabulation Procedures

Tabulations⁸ for each question in the survey are shown on a set of facing pages. The text of the questions and response options are shown at the top of the even-numbered pages with only the question number repeated on the odd-numbered pages. The central feature of the tabulations is the percentage of spouses choosing the response options indicated by the column heading. Within a set of response options, percentages may not add to 100% due to rounding error.

Where an item can be presented as an average, that average is shown as a number estimate and in a bar chart. The averages lend themselves to a quick scan for reporting groups differing from other similarly defined groups. Where a true response continuum is available (e.g., number of children), the mean of that continuum is presented; in other cases, the responses are averages of the numeric scales presented with the response options. Where there is a simple binomial response (e.g., yes/no), only one percentage is presented. In this case, the bar chart represents that percentage. When multi-level response scales (e.g., “yes,” “no,” “don’t know”) can be dichotomized, the bar chart represents either the sum of the percentages in multiple columns (e.g., “no” and “don’t know” summed) or the percentage in one column (e.g., “yes”).

On each page of tabulations, the first column lists the reporting group shown in that row. The second column, *Percent Responding*, lists the portion of the reporting group represented in the estimates in that row. In most cases, if this percentage is not 100, it reflects item nonresponse, and the table note indicates that “Percent responding are active duty member spouses who answered the question.”

Not all questions will apply to every respondent. Respondents to the paper version of the survey are instructed to skip questions that do not apply to them (based on their answers to previous questions). Where possible, the Web survey is programmed to skip respondents over questions that do not apply to them. For example, Q79 asks spouses whether their husband/wife’s most recent deployment had been to a combat zone. This question does not apply to those who marked in Q73 that their spouse has not ever been deployed. The table note for this question indicates that the “Percent responding are active duty member spouses who answered the question and whose husband/wife had been deployed (Q73).”

It is often not practical to skip respondents out of every survey item that does not apply to them. For these items, *Does not apply* responses are often tabulated separately. For example, Q95 asked when respondents expected their husband/wife’s next deployment. Responses of *Does not apply*, *I do not expect my spouse to be*

⁷ There is also a slight difference in the treatment of missing data. Cases with missing data are included in counts of respondents, but are excluded from population estimates.

⁸ Details of data editing and preparation are provided by DMDC (2013a).

deployed were tabulated separately as responses to the constructed question, *Do you expect your spouse to be deployed in the future?*

Because the survey contains open-ended questions, not all responses are tabulated. For example, if spouses indicated that their family required special medical or educational needs (Q42) but did not enroll in the Exceptional Family Member Program (EFMP; Q43); they were asked to explain their reasons for not participating in EFMP. Since it is not feasible to tabulate the wide range of responses, the open-ended responses for Q43 are not tabulated.

Paper and Web Survey Comparability

On occasion, the paper and Web versions of the survey differ. These differences result from the technological advantages and requirements available in a Web-based survey. Question stems differ slightly between the paper and Web versions of the survey. On the paper version of the survey, question stems will refer to specific survey items, whereas questions on the Web version are not numbered. The Web version of the survey contains additional survey items, as well as more open-ended questions.

In addition to variations in the question text between the paper and Web versions of the survey, the survey response options also differ at times. A common difference between the surveys is the use of *Does not apply* response options on the paper version that are unnecessary in the Web version due to “smart skip” technology. For example, in Q63 of the paper version, respondents are asked whether they feel their counseling experiences were beneficial. Spouses could mark either *Yes*, *No*, or *Does not apply; I have never seen a counselor*. On the Web version of the question (Q64), respondents who had indicated that they had not seen a counselor either in the past six months or during their spouse’s active duty career were automatically skipped over the question.

In constructing the dataset that combines the paper and Web respondents, the Web version of questions was typically used. The responses to the paper-and-pencil version of the questions were recoded to comply with the Web version. Exceptions may occur when the tabulation of a survey item would benefit from presenting responses in a manner representative of the total population, as opposed to only the applicable population, by coding respondents who were skipped over the question to force their inclusion.

Combining Information From Multiple Items or Response Options

Tabulations in this volume generally present data for individual survey questions.⁹ There are four exceptions. The first type of exception is where the results for multiple items are presented on a single set of pages.

- In Q31a-b, spouses were asked if they wanted (Q31a) or needed (Q31b) to work. The tabulation shows percentages who answered Yes to Q31a and Q31b on one set of pages, so as to allow comparison between the percentages.

The second exception is where spouses can provide multiple answers to a single question (e.g., race).

- In Q7, spouses were asked to mark one or more races. The tabulations show the percentage who responded that they were *White*, *Black* or *African American*, *American Indian* or *Alaska Native*, *Asian*, or *Native Hawaiian* or *Other Pacific Islander*. Respondents who indicated more than one race are also shown in the percentage of *More Than One Race* Marked. For example, if a respondent indicated they were *Asian* and *White*, they were counted in the percentage as *Asian*, *White*, and *More Than One Race*.

The third exception pertains to combining response options from a single item to present an aggregate number.

- For example, Q73 asked spouses if their husband/wife had been deployed for more than 30 consecutive days. Spouses could indicate *Yes, in the past 36 months*, *Yes, but not in the past 36 months*, or *No*. In addition to the tabulation showing the percentage of those who marked these response options, a composite tabulation shows the total percentage of those who responded to either *Yes* option and reflects *Percent Deployed During Career*.

The fourth exception pertains to constructed composite measures (e.g., scales, incident rates, summary variables) described below. For example, an incident rate for financial problems was constructed from multiple items. With the exception of spouse employment, individual items in each measure are presented first, followed by tabulation pages showing composite measure results.

- *Employment status*—Spouse employment indicators are derived from Q17-20 and Q103-115 and are comparable to employment measures used in the U.S. Census Bureau's *Decennial Census* and *Current Population Survey* (CPS). Two sets of tabulations are presented. In the first set, labor force participation is shown for the spouses of those in the reporting category.

⁹ Demographic information based on member administrative data is also presented. For example, member Service, paygrade, and spouse gender were constructed from administrative data.

The three categories contain percentages of employed, unemployed, and not in the labor market. Those not in the labor market includes those who are permanently or temporarily not working or not actively looking for work.¹⁰ The second set of data shows only those in the labor market. That is, the percent responding are spouses who answered the items and are in the labor market (civilian employed and unemployed but looking for work). The unemployment rates shown in these tables are the percent of those who are actively looking for work and who are unemployed.

- *Attachment Behavior Index (AQS)*—The AQS is used to measure insecurity of children in military families. A benefit of the AQS is its applicability across a range of age groups from young toddlers to adolescents. The AQS has been shown to be a valid measure of a child's markers of insecurity as indexed by the child's behavior based around a specific caregiver. The scale is constructed from Q53a-f, with Q53a reverse-coded. Spouses must have responded to all of the subitems in the scale to be included. Scores are reported as a single figure, which is the average of the individual scores (range 1 to 5). Higher scores indicate higher levels of insecurity in children. For details, refer to Waters, Vaughn, Posada, and Kondo-Ikemura (1995).
- *Child Behavior Checklist*—The *Child Behavior Checklist* was created by DMDC to capture the potential problematic behaviors in children, including academic and behavioral problems. Traditional scales that capture these behaviors are difficult to use due to the range of ages this scale needed to cover (ages 0 to 17). DMDC created this scale as a way of measuring problem behaviors across this age range. The scale is constructed from Q54a-g. Respondents must have answered all of the subitems in the scale to be included. Q54d, f, g are reverse-coded in the construction of the overall score. The score is built by summing the presence/absence of the behavior ("yes" has the value 1 and "no" and "not applicable" have the value of 0). Scores are reported as a single figure, which is the sum of the individual scores (range 0 to 7). A higher score indicates a higher incidence of problematic behaviors.
- *Patient Health (PHQ-4)*—The *PHQ-4* is designed to identify potential mental health concerns by measuring the extent that spouses have felt negative emotions, such as depression, anxiety, or nervousness, in the two weeks before taking the survey. This scale is constructed from Q56a-d and spouses must have responded to all of the subitems in the scale to be included. Each item is rated on a 1 to 4 scale. Scores on the *PHQ-4* are reported as a single figure, which is the average of the individual scores. A higher total score indicates a higher likelihood of mental illness. For details, see Kroenke, Spitzer, and Williams (2001).

¹⁰ Those who have not actively looked for work in the past 4 weeks are considered to be out of the labor market. This category includes some percentage of spouses who are in the midst of a PCS move and, therefore, only temporarily out of the labor market.

- *Family Crisis Oriented Personal Evaluation Scale (F-COPES)*—The *F-COPES* measures a variety of coping behaviors and problem solving strategies that respondents may indicate they and their families use in times of stress or crisis. This scale is constructed from Q57a-u and spouses must have responded to 90% of the subitems in the scale to be included. Each item is rated on a 1 to 5 scale. Scores are reported as a single figure, which is the average of the individual scores. Q57r and t are reverse-coded in the construction of the overall score. A higher total score indicates better ability to cope with stressful situations. In addition, the *F-COPES* has five subfactors (McCubbin, Olson, & Larsen, 1996). These subfactors include *Acquiring Social Support* (Q57a, b, e, g, i, and u; measures an individual's reliance on family and/or friends during difficult times), *Reframing* (Q57c, k, m, o, and q; measures an individual's ability to view a difficult situation in a more positive way or by accepting difficulties as a part of life), *Seeking Spiritual Support* (Q57j, p, and s; measures an individual's use of spiritual resources, such as church, and/or the use of spiritual advisors, such as church-based counseling, during difficult times), *Mobilizing to Acquire and Accept Help* (Q57d, f, h, and n; measures an individual's ability to cope with difficulties by seeking out and accepting help from others such as friends, other military families, health providers, etc.), and *Passive Appraisal* (Q57r and t; measures an individual's inability to cope with difficult situations or crises due to an avoidant interpretation of the challenging situation, such as believing if they wait long enough, the problem will go away). Scores are reported using the average of the subitems in each subfactor. Q57l is included in the overall score, but researchers have not included this item in the construction of subfactors (McCubbin, Olson, & Larsen, 1996). Respondents must have answered all of the subitems within each subfactor to be included in that specific score. Each of these subfactors are presented as separate tab pages. With the exception of *Passive Appraisal*, higher scores on subfactors indicate more frequent use of these positive coping strategies. For *Passive Appraisal*, higher scores also indicate more frequent use of this coping strategy, but research has found that the use of *Passive Appraisal* is not conducive to effective coping and is therefore considered a negative coping strategy. For details on the *F-COPES*, see McCubbin, Olson, and Larsen (1996).
- *General Health*—The *General Health* scale is designed to provide a self-assessment of overall physical well-being. The four scale items (Q59a-d) were taken from the general health perceptions subscale on the Short-Form Health Survey (SF-36) of the Medical Outcomes Study questionnaire (Ware & Sherbourne, 1992). For the purposes of this report, Q59 b and c were reverse-coded. Higher scores on this measure indicate members have more positive perceptions of their health.
- *Marital Instability Index (MII)*—An abbreviated version of the *MII* is used to capture the extent that respondents perceive problems in their marriages. The scale is constructed from Q61a-e and respondents must have

answered all of the subitems in the scale to be included. Each item is rated on a two point scale (yes/no). Scores are reported as a single figure, which is the sum of the individual scores (range 0 to 5). A higher score indicates a greater amount of perceived problems within the marriage. For more details, see Edwards, Johnson, and Booth (2000).

- *Social Support Index (SSI)*—The *SSI*, derived from items Q70a-r, captures the degree to which spouses have a community or network of people, other than their spouse, who they can depend on and who can provide companionship and assistance. Respondents must have answered 90% of the subitems in the scale to be included. Scores are reported as a single figure, which is the average of the individual scores (range 1 to 5). A higher total score indicates greater perceived support. In addition, the *SSI* has four subfactors reviewed in the literature (McCubbin, Patterson, & Glynn, 1996). These factors include Community as a Source of Support (Q70b, e, g, l, and n; measures an individual's belief that the community offers supportive resources during difficult times and that individuals feel secure living in the community), Emotional, Esteem, and Friendship Network (Q70f, i, p, and q; measures an individual's reliance on friends for emotional support and for increasing self-esteem), Family Community Connection (Q70h, j, k, o, and r; measures an individual's belief that community members and family members mutually support and understand each other), and Family Affection and Commitment (Q70a, c, d, and m; measures an individual's belief that family members support and show affection for each other). Q70h, j, k, n, o and r are reverse-coded in both the construction of subfactors and the construction of the overall score. Scores are reported using the average of the subitems in each subfactor. Respondents must have answered all of the subitems within each subfactor to be included in that specific score. Each of these subfactors is presented as separate tab pages. Q70a is not a question in the traditional *SSI* but was added for the purpose of this survey. Principal component analysis indicated Q70a loaded significantly on the first factor of Family Affection and Commitment and was therefore included in this group. For each subfactor, higher scores indicate higher perceived support in that specific network.

Margins of Error

The complex sample design required weighting to produce population estimates (e.g., percent female).¹¹ Because of the weighting, conventional formulas for calculating the margin of error will overstate the reliability of the estimate. For this

¹¹ This differential weighting means that only certain statistical software procedures, such as SUDAAN[®] PROC DESCRIPT, correctly calculate standard errors, variances, or tests of statistical significance for stratified samples.

[®] Registered 2004 by Research Triangle Institute, P.O. Box 12194, Research Triangle Park, NC 27709-2194.

report, variance estimates were calculated using SUDAAN[®] PROC DESCRIPT (Research Triangle Institute, Inc., 2004).

By definition, sample surveys are subject to sampling error. Standard errors are estimates of the variance around population parameters (such as percentages or means) and are used to construct margins of error (i.e., confidence interval half-widths). Percentages and means in these tabulations are reported with margins of error based on 95% confidence intervals. In order to compress the data display, only the maximum margin of error (Max ME) for each reporting category is shown. That is, the tab volume shows only the largest margin of error for the percentages or means in each row. For each average shown in these tabulations, its margin of error is also printed.

The following reporting conventions are used:

- “o” indicates that no one in any reporting group selected the response option,
- NR indicates the estimate is *Not Reportable* and is suppressed because of low reliability. Estimates of low reliability are suppressed based on criteria defined in terms of nominal sample size (less than 5), effective sample size (less than 30), or relative standard error (greater than 0.225),
- NA indicates the question was *Not Applicable* because the question did not apply to respondents in the reporting category based on answers to previous questions,
- no Max ME is printed when all percentages in the row are shown as NR,
- no margin of error is printed for an average when it is shown as NR.

Note. Percent responding are active duty member spouses who answered the question, who were not in the labor force (Q17-Q20), and who indicated at least one reason that they were not looking for work (Q21). Spouses who responded by paper did not see this item and are not included in these percentages. This question is tabulated across multiple sets of pages; row percentages sum to 100 across these pages.

Note. Percent responding are active duty member spouses who answered the question, who had a child living at home (Q44), and who identified one child who was living at home (Q51). The scale ranges from 1 to 5. Higher scores indicate higher levels of insecurity. Cronbach's coefficient alpha = 0.71. Cronbach's coefficient alpha ranges in value from 0 to 1. Values 0.70 or greater indicate higher reliability meaning that the items are internally consistent.

53. Attachment Behavior Index (AQS): Constructed from Q53. AQS can be used across age groups to measure markers of insecurity around a caregiver.

Note. Percent responding are active duty member spouses who answered the question. The scale ranges from 1 to 4. Higher scores indicate higher levels of depression, nervousness, and/or anxiety. Cronbach's coefficient alpha = 0.88. Cronbach's coefficient alpha ranges in value from 0 to 1. Values 0.70 or greater indicate higher reliability meaning that the items are internally consistent.

Note. Percent responding are active duty member spouses who answered the question. The scale ranges from 1 to 4. Higher scores indicate higher levels of depression, nervousness, and/or anxiety. Cronbach's coefficient alpha = 0.88. Cronbach's coefficient alpha ranges in value from 0 to 1. Values 0.70 or greater indicate higher reliability meaning that the items are internally consistent.

Note. Percent responding are active duty member spouses who answered the question. The scale ranges from 1 to 5. Higher scores indicate more frequent use of this coping strategy. Cronbach's coefficient alpha = 0.80. Cronbach's coefficient alpha ranges in value from 0 to 1. Values 0.70 or greater indicate higher reliability meaning that the items are internally consistent.

57. Reframing: Constructed from Q57c, k, m, o, and q. Subfactor of Family Crisis Oriented Personal Evaluation Scale (F-COPES). Measures an individual's ability to view a difficult situation in a more positive way or by accepting difficulties as a part of life.

Note. Percent responding are active duty member spouses who answered the question. The scale ranges from 1 to 5. Higher scores indicate more frequent use of this coping strategy. Cronbach's coefficient alpha = 0.73. Cronbach's coefficient alpha ranges in value from 0 to 1. Values 0.70 or greater indicate higher reliability meaning that the items are internally consistent.

57. Passive Appraisal: Constructed from Q57r and t. Subfactor of Family Crisis Oriented Personal Evaluation Scale (F-COPES). Measures an individual's inability to cope with difficult situations or crises due to an avoidant interpretation of the challenging situation (e.g. believing if they wait long enough, the problem will go away).

Note. Percent responding are active duty member spouses who answered the question. The scale ranges from 1 to 5. Higher scores indicate a higher level of social support. Cronbach's coefficient alpha = 0.81. Cronbach's coefficient alpha ranges in value from 0 to 1. Values 0.70 or greater indicate higher reliability meaning that the items are internally consistent.

70. Family Community Connection: Constructed from Q70h, j, k, o, and r. Subfactor of Social Support Index. Measures an individual's belief that community members and family members mutually support and understand each other.

PRIVACY ACT STATEMENT & INFORMED CONSENT INFORMATION

In accordance with the Privacy Act, this notice informs you of the purpose of the survey and how the findings of these surveys will be used. It also provides information about the Privacy Act and about informed consent. Please read it carefully.

AUTHORITY: 10 United States Code (USC), Sections 136, 1782, and 2358

PRINCIPAL PURPOSE: Information collected in this survey will be used to research attitudes and perceptions of military spouses. This information will assist in the formulation of policies which may be needed to improve the programs that benefit military families. Reports will be provided to the Office of the Secretary of Defense, each Military Department, and the Joint Chiefs of Staff. Findings will be used in reports and testimony provided to Congress. Some findings may be published by the Defense Manpower Data Center (DMDC) or in professional journals, or presented at conferences, symposia, and scientific meetings. Data could be used in future research. Datasets without any identifying information may be analyzed by researchers outside of DMDC. Briefings and reports on results from these surveys will be posted on the Web: <http://www.dmdc.osd.mil/surveys/>

ROUTINE USES: None.

DISCLOSURE: Providing information on this survey is voluntary. Most people can complete the survey in approximately 30 minutes. There is no penalty or loss of benefits to which you are entitled if you choose not to respond. However, maximum participation is encouraged so that the data will be complete and representative. Your survey responses will be treated as confidential. Identifying information will be used only by government and contractor staff engaged in, and for purposes of, the survey research. For example, the research oversight office of the Office of the Under Secretary of Defense (Personnel and Readiness) and representatives of the U.S. Army Medical Research and Materiel Command are eligible to review research records as a part of their responsibility to protect human subjects in research. This survey is being conducted for research purposes. In no case will individual identifiable survey responses be reported. If you answer any items and indicate distress or being upset, etc., you will not be contacted for follow-up purposes. However, if you indicate a direct threat to harm yourself or others within responses or communications about the survey, because of concern for your welfare, DMDC may notify an office in your area for appropriate action.

SURVEY ELIGIBILITY AND POTENTIAL BENEFITS: DMDC uses well-established, scientific procedures to randomly select a sample that represents the Defense community based on combinations of demographic characteristics (for example, deployment status, service and gender). This is your chance to be heard on issues that directly affect you, including impact of deployments, childcare programs, employment programs, and overall satisfaction with military life. While there is no direct benefit for your individual participation, your responses on this survey **make a difference**.

STATEMENT OF RISK: The data collection procedures are not expected to involve any risk to you. The only risk to you is accidental or unintentional disclosure of the data you provide. However, the government and its contractors have a number of policies and procedures to ensure that survey data are safe and protected. For example, no identifying information (name, address, e-mail address) is ever stored in the same file as survey responses. Survey data may be shared with organizations doing research on DoD personnel but only after minimizing detailed demographic data (for example, paygrade and detailed location information) that could possibly be used to identify an individual. A confidentiality analysis is performed to reduce the risk of there being a combination of demographic variables that can single out an individual. Government and contractor staff members have been trained to protect client identity and are subject to civil penalties for violating your confidentiality. You may experience discomfort and/or other emotions while completing the survey. If this occurs, you may contact Military OneSource to find an appropriate helping professional.

FREQUENTLY ASKED QUESTIONS

What is Defense Manpower Data Center (DMDC)?

- DMDC maintains the largest archive of personnel, manpower, training, and financial data in Department of Defense (DoD). DMDC also conducts Joint-Service surveys including the Status of Forces Surveys, QuickCompass, and Human Relations Surveys for the Department of Defense. To learn more, visit the DMDC Web site.

<http://www.dmdc.osd.mil/>

What is the Human Relations Survey Program?

- Human Relations Survey is a DoD personnel program that features Web-based surveys sponsored by the Under Secretary of Defense for Personnel and Readiness (USD[P&R]).
- These surveys enable the DoD to regularly assess the attitudes and opinions of the DoD community - active duty and Reserve component members, and DoD civilian employees - on the full range of personnel issues.

How do I know this is an official, approved DoD survey?

- In accordance with DoD Instruction 8910.01, all data collection in the Department must be licensed and show that license as a Report Control Symbol (RCS) with an expiration date. The RCS for this survey is RCS# DD-P&R(AR)2145, expiring 4/30/2014.

How did you pick me?

- DMDC uses well-established, scientific procedures to randomly select a sample that represents the Defense community based on combinations of demographic characteristics (e.g., deployment status, service and gender).

Why should I participate?

- This is your chance to be heard on issues that directly affect you, including impact of deployments on you, your spouse and children, your health and financial well-being, your employment opportunities, and overall satisfaction with military life.
- Your responses on this survey **make a difference**.

How do I participate?

- The survey will be available at this Web site around November 19, 2012. At the present time, you may (1) read the Privacy Act Statement, (2) verify contact information, and (3) provide e-mail address(es) so we can notify you when the survey opens.

What is ADSSurvey@osd.pentagon.mil?

- The official e-mail address for communicating with military spouses about Human Relations Surveys. "ADSSurvey" is short for Active Duty Spouses Survey.

Why am I being asked to use the Web?

- Web administration enables us to get survey results to senior Defense leaders faster.

Why are you using a .net instead of a .mil domain to field your survey?

- The survey is administered by our contractor, Data Recognition Corporation, an experienced survey operations company. The survey collection tool starts on a .mil site within DMDC. Once you enter your ticket number you are redirected to a contractor site which uses a .net domain. This allows everyone to access the survey, even from a non-government computer.

Do I have to answer all questions?

- No, it is not necessary to answer every question. Within the survey screen, you have four control buttons: *Next Page* (→), *Previous Page* (←), *Clear Responses* and *Save and Return Later*. Use these buttons to navigate

through the survey or skip questions. Use the *Save and Return Later* button to give yourself flexibility to complete the survey at a convenient time. When you return to the survey Web site, enter your Ticket Number to get to the place in the survey where you had stopped.

Why does the survey ask personal questions?

- DMDC reports overall results, as well as by other characteristics, such as location, gender, etc. To complete these analyses, we must ask respondents for these types of demographic information.
- Analyzing results in this way provides Defense leaders information about the attitudes and concerns of all subgroups of personnel so that no groups are overlooked.
- Sometimes sensitive questions are asked in order to improve personnel policies, programs, and practices. As with all questions on the surveys, your responses will be held in confidence.

Will my answers be kept private?

- Your privacy will be safeguarded in accordance with the Privacy Act of 1974 (Public Law 93-579).
- All data will be reported in the aggregate and no individual data will be reported.
- We encourage you to safeguard your Ticket Number to prevent unauthorized access to your survey. In addition, to ensure your privacy, be aware of the environment in which you take the survey (e.g., take the survey when no one else is home, take care to not leave the survey unattended).

Can I withdraw my answers once I have started the survey?

- If you wish to withdraw your answers, please notify the Survey Processing Center prior to February 21, 2013 by sending an e-mail to ADSSurvey@osd.pentagon.mil or calling, toll-free 1-800-881-5307. Include your name, Ticket Number and PIN.

Will I ever see the results of the survey?

- DMDC posts survey results on the following Web site:

<http://www.dmdc.osd.mil/surveys/>

PRIVACY ACT STATEMENT & INFORMED CONSENT INFORMATION

In accordance with the Privacy Act, this notice informs you of the purpose of the survey and how the findings of these surveys will be used. It also provides information about the Privacy Act and about informed consent. Please read it carefully. **Returning this survey indicates your agreement to participate in this research.**

AUTHORITY: 10 United States Code (USC), Sections 136, 1782, and 2358

PRINCIPAL PURPOSE: Information collected in this survey will be used to research attitudes and perceptions of military spouses. This information will assist in the formulation of policies which may be needed to improve the programs that benefit military families. Reports will be provided to the Office of the Secretary of Defense, each Military Department, and the Joint Chiefs of Staff. Findings will be used in reports and testimony provided to Congress. Some findings may be published by the Defense Manpower Data Center (DMDC) or in professional journals, or presented at conferences, symposia, and scientific meetings. Data could be used in future research. Datasets without any identifying information may be analyzed by researchers outside of DMDC. Briefings and reports on results from these surveys will be posted on the Web: <http://www.dmdc.osd.mil/surveys/>

ROUTINE USES: None.

DISCLOSURE: Providing information on this survey is voluntary. Most people can complete the survey in approximately 30 minutes. There is no penalty or loss of benefits to which you are entitled if you choose not to respond. However, maximum participation is encouraged so that the data will be complete and representative. Your survey responses will be treated as confidential. Identifying information will be used only by government and contractor staff engaged in, and for purposes of, the survey research. For example, the research oversight office of the Office of the Under Secretary of Defense (Personnel and Readiness) and representatives of the U.S. Army Medical Research and Materiel Command are eligible to review research records as a part of their responsibility to protect human subjects in research. This survey is being conducted for research purposes. In no case will individual identifiable survey responses be reported. If you answer any items and indicate distress or being upset, etc., you will not be contacted for follow-up purposes. However, if you indicate a direct threat to harm yourself or others within responses or communications about the survey, because of concern for your welfare, DMDC may notify an office in your area for appropriate action.

SURVEY ELIGIBILITY AND POTENTIAL BENEFITS: DMDC uses well-established, scientific procedures to randomly select a sample that represents the Defense community based on combinations of demographic characteristics (for example, deployment status, service and gender). This is your chance to be heard on issues that directly affect you, including impact of deployments, childcare programs, employment programs, and overall satisfaction with military life. While there is no direct benefit for your individual participation, your responses on this survey **make a difference**.

STATEMENT OF RISK: The data collection procedures are not expected to involve any risk to you. The only risk to you is accidental or unintentional disclosure of the data you provide. However, the government and its contractors have a number of policies and procedures to ensure that survey data are safe and protected. For example, no identifying information (name, address, e-mail address) is ever stored in the same file as survey responses. Survey data may be shared with organizations doing research on DoD personnel but only after minimizing detailed demographic data (for example, paygrade and detailed location information) that could possibly be used to identify an individual. A confidentiality analysis is performed to reduce the risk of there being a combination of demographic variables that can single out an individual. Government and contractor staff members have been trained to protect client identity and are subject to civil penalties for violating your confidentiality. You may experience discomfort and/or other emotions while completing the survey. If this occurs, you may contact Military OneSource to find an appropriate helping professional. If you experience any difficulties taking the survey, please contact the Survey Processing Center by sending an e-mail to ADSSurvey@osd.pentagon.mil or call, toll-free, 1-800-881-5307. If you have concerns about your rights as a research participant, please contact the OUSD(P&R) Research Regulatory Oversight Office at 703-575-2677/703-575-3536 or e-mail R2Q2@lma.osd.mil

Once you start answering the survey, if you desire to withdraw your answers, please notify the Survey Processing Center prior to February 21, 2013. Please include in the e-mail or phone message your name, Ticket Number, and the PIN that you selected when you started this survey. Unless withdrawn, partially completed survey data may be used after that date.
